📋 CAREER OBJECTIVE

Motivated Data Scientist with 1.5 year of practical experience in developing end-to-end AI solutions using Generative AI, Machine Learning, Computer Vision, and NLP. Experienced in building, deploying, and optimizing models on cloud platforms to solve real-world business problems. Passionate about leveraging data, advanced analytics, and AI technologies to generate actionable insights and drive innovation.

🧠 SKILLS

Machine Learning — Regression, Classification (RF, SVM) and Clustering (K-Means), Recommendation Systems, Ensemble Learning (Bagging & Boosting), Feature Engineering, Model Selection | **Deep Learning** — Computer Vision (Image Classification, Detection, and Segmentation) NLP (Transformers, LSTM, and RNN) | **Programming Languages:** Python (OOP, Data Structures & Algorithms, API Development, Debugging), SQL | **Generative AI:** LLMs, RAG, AI Agents, Prompt Engineering, Embeddings, Vector Search, NL2SQL, LoRA, VLM, MCP, A2A, ReAct Agent, n8n, Llama3, GPT-4o, Hugging Face Transformers | **Frameworks & Libraries:** LangChain, LangGraph, LlamaIndex, FastAPI, TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy | **Databases** — MySQL, MongoDB, Vectore Databases (Pinecone, Weaviate & ChromaDB, FAISS) | **MLOps/Cloud** — Docker, GitHub Actions, AWS (SageMaker, Lambda, S3, ECS), GCP (Vertex AI, BigQuery, Cloud Run) | **Model Evaluation & Monitoring:** LangSmith, Ragas, DeepEval

📁 WORK EXPERIENCE

AI Associate

06/2025 – 05/2026 | Bangalore

ResourcePro

- Developed AI-driven automation workflows to streamline insurance operations and reduce manual effort.
- Performed data extraction, cleaning, and validation to support accurate analytics and decision-making.
- Built ML and rule-based models for submission processing, risk scoring, and workflow optimization.
- Collaborated on API integrations and low-code solutions to enhance system efficiency without disrupting existing platforms. prove productivity, and ensure smooth coordination across departments.

Data Analyst Intern

10/2024 – 01/2025 | Bangalore

AI4SEE Pvt Ltd

- Worked on Data collection, augmentation, cleaning and annotated the data using RoboFlow for YOLOV10 model.
- Developed a Real-time Object Detection System integrating YOLOv10 and DERT Models, enhancing detection accuracy using Non-Maximum Suppression (NMS) and Intersection over Union (IoU).
- Researched garbage classification (biodegradable & non-biodegradable) to advance waste management automation.
- Worked on Graph Neural Networks (GNNs) for traffic prediction, improving real-time traffic forecasting accuracy

Data Science Intern

06/2024 – 10/2024 | Bangalore

iNeuron Intelligence Pvt Ltd

- Developed an AI-powered data analysis system using Large Language Models (LLMs) via Groq API, automating insights generation.
- Implemented real-time processing & predictive modeling, ensuring quick adaptation to changing data patterns.
- Designed scalable and secure data pipelines, enhancing business intelligence applications.
- Explored various LLM's performance for the data analysis.

EDUCATION

MCA

Bangalore University

MCA was completed with distinction, achieving an overall CGPA of **8.05**.

01/2023 – 11/2024 | Bengaluru, India

BCA

Kuvempu University

BCA was completed with First Class, achieving an overall GPA of **74.5%**

06/2019 – 11/2022 | Shivamogga, India

PROJECTS

Medical Chatbot using Generative AI

An AI-powered medical assistant designed to answer user health-related queries using advanced Large Language Models (LLMs). The system uses Retrieval-Augmented Generation (RAG) to fetch relevant medical context from a Pinecone vector database and responds via a Flask-based interface. The chatbot is capable of providing personalized, context-aware responses to patient queries, simulating human-like interaction in a medical consultation.

Tech stack: Pinecone, LangChain, RAG, LLaMA3, GROQ API, Flask, Python, AWS BedRock, API Gateway, Lambda

Book Recommendation System

A smart recommendation engine built using collaborative filtering techniques to suggest books based on user preferences. Leveraging user-item interactions, the system identifies similar users and recommends books they've enjoyed. It is adaptable to various domains like movies, cosmetics, fashion, and more. The model is trained on a book dataset containing ratings and user IDs, enabling accurate suggestions through clustering-based similarity measurement.

Tech stack: Python, Scikit-learn, Pandas, K-Nearest Neighbors, Sagemaker, Cloud Function, Git hub action

Fire & Smoke Detection System

A real-time object detection application built using the YOLOv11 model, trained on a custom dataset annotated via Roboflow. The system is designed to accurately detect fire and smoke in images and video frames, enhancing early warning systems in safety-critical environments. It supports inference on visual inputs and overlays detection results directly onto the media for clear interpretation.

Tech stack: Python, YOLOv11, Roboflow, OpenCV, Google Colab

Source Code Analysis using Generative AI

Developed a system to automatically analyze Python source code files and extract structural and logical components. Improved code understanding by identifying classes, functions, and their interdependencies for better documentation. Implemented error detection and pattern recognition to enhance maintainability and code quality. Optimized the parsing logic for scalability across large repositories and different codebases.

Tech Stack: Python, AST (Abstract Syntax Tree), Regex, Pandas, Streamlit, Jupyter Notebook.

CERTIFICATE

Generative AI Mastery — Euron

Full stack Data Science — Euron

Fundamentals of Generative AI — Microsoft

Full-Stack Web Development — OctaNet

Python Programming — CodSoft

Soft Skills & Personality Development — CRACK-ED

CSS, Bootstrap, JavaScript & PHP — Udemy

Python for Data Analysis — Great Learning

Artificial Intelligence — IBM
